

Recap Of The Financial Markets

www.faganasset.com

Week Ended September 4th, 2009.

The stock market retreated a bit this past week as many investors, including us, wonder whether or not the “second derivative” trade is nearing an end and now we need some good economic news to push us higher. That said, the Index of Leading Economic Indicators has been improving and as stocks lifted off their bottoms during early March amidst bleak economic news, this one may push higher in anticipation of the good news noted above that may come next Spring. Therein lies the ammunition for the bullish as well as the bearish camp. We fall in the camp that the downside remains relatively limited and even if the upside does as well, we will remain invested and increase those investments upon pullbacks. Short-term, as we exit the Summer and professional investors return from “the Hamptons,” let’s see if the overall tenor of the market changes, at least for the historically bearish month of September. We’re closing in on five consecutive up months so it makes sense that a correction is rational and necessary. In fact, we’ve been right on in our analysis of this bull market noting over-and-over that although stocks could certainly use a breather, after a period of consolidation or of correcting, in our opinion, this rally still has legs. As noted above, given the fact that we believe the risk/reward level still remains positive, we will stay invested and wait to see. In other words, don’t fight the tape. **We continue to encourage equity investors to add to positions on fear and weakness rather than to sell on strength. We also encourage income oriented investors to look at corporate, municipal and agency and foreign government issues.**

Economic Releases

Majority of Economic Data found at www.haver.com

Friday, September 4th

NON-FARM PAYROLLS fell by 216,000 during August, slightly less than the consensus estimate of 230,000 and the smallest drop in more than a year. July payrolls fell by 247,000. Encouragingly, over the past three months declines in non-farm payrolls averaged 318,000 versus a record high of 701,000 over the latter part of 2008 and early 2009. At least for the time being, job cuts peaked during this past January at 741,000 the most since 1949. The **UNEMPLOYMENT RATE** rose to 9.7% during August from 9.4%, the highest since June 1983, a rate which many believe will peak above ten percent early next year. The August drop brings the total number of jobs lost since this recession started in November 2007, twenty months ago to 6.9 million, a record for this timeframe. Furthermore, if laid-off workers who have given up looking for new jobs or are working part-time out of necessity were included, the unemployment rate would have been 16.8% in August, up from 16.3% one month prior, the highest rate since these types of records began being kept in 1994. The Unemployment Rate was 6.2% one year ago. The **labor force participation rate** held steady at 65.5% during August. **Average hourly earnings** rose by \$0.06 to \$18.65 from \$18.59 while over the past year, AVE has have risen 2.6%. **Hours worked** edged held at 33.1 hours, near the all-time record low of 33.0 hours set during June. The combination pushed **average weekly earnings** up \$1.99 or 0.32% to \$617.32 from \$615.33. Average weekly earnings have risen by just 0.8% over the past year, in large part due to declines in the length of the average workweek. *At this particular time it is difficult to envision the labor market making substantial gains while the average workweek is near historic lows, capacity utilization remains low and the unemployment rate remains high.*

Thursday, September 3rd

The Institute for Supply Management's **composite index of non-manufacturing (service) sector activity** rose to 48.4% during August from 46.4% in July, bringing it back to a pre-crisis level recorded during September 2008. Of note, was the rise **New Orders** (49.9 v. 48.1), **Export Orders** (54.0 v. 47.5), and **Import Orders** (49.0 v. 45.0). The ISM Index also registered growth in the **Employment Component** (43.5 v. 41.5) and a surge in the **Prices Paid Component** (63.1 v. 41.3).

INITIAL CLAIMS FOR UNEMPLOYMENT BENEFITS for the week ended August 29th fell 4,000 this past week to 570,000 from 574,000 one week prior, *numbers consistent with an economy in recession as well as an indication that despite the recent pick-up in economic activity, the labor market has yet to benefit in any substantial manner.* The four-week rolling average increased 4,000 to 571,250 from a revised level of 567,250 one week prior. Continuing claims for the week ended August 22nd increased 92,000 to 6.234 million from 6.142 million one week prior, nearly double year-ago levels. The continuing claims four-week average decreased 27,250 to 6.217 from 6.244 million.

Wednesday, September 2nd

SECOND QUARTER PRODUCTIVITY was revised upward to an annualized rate of 6.6% from an initially reported 6.4%, the strongest quarterly growth since the second quarter of 2003. Not only did productivity jump, but it did so amidst a severe economic downturn, contrary to nearly any other recessionary period in the history of our nation. Over the past year, productivity has risen 1.9%. **HOURLY COMPENSATION** rose at a revised annualized rate of 0.3% during Q2 from an initially reported jump of 1.2% (0.7% y/y), accounting for the slight change in overall productivity. **UNIT LABOR COSTS** (defined as output per hour of work and can be determined by dividing hourly labor costs by output per hour) fell at a revised annualized rate of 5.9% (-1.2% y/y) during Q2 from an initially reported decline of 5.8% and down from -2.7% during Q1. The sharp increase in productivity was a result of sharper cost cutting by employers in the form of hours worked and the number of employees when compared to output.

U.S. FACTORY ORDERS rose a strong 1.3% during July, thus marking the fifth monthly increase over the past six months. Factory Orders rose a revised 0.9% during June. Excluding transportation, factory orders shrank 0.7%.

Tuesday, September 1st

U.S. CONSTRUCTION SPENDING shrank 0.2% during July, twice the 0.1% gains registered during June, and in so doing are now at February 2004 levels. Over the past year Construction Spending has fallen 10.5%. **Private Construction Spending** edged up 0.1% during July, but has fallen 17.0% y/y while **Private Residential Construction Spending** rose 2.3% (-27.8% y/y) perhaps indicating a bottom has been reached. **Private Nonresidential Construction Spending** slipped 1.2% (-8.3% y/y). Finally, **Public Construction** fell 0.7% during July, but has risen 5.5% y/y.

The Institute for Supply Management's **composite index of manufacturing sector activity** improved to a level of 52.9% during August, its highest level since June 2007, from 48.9% during July. The ISM hit a low of 32.9% this past December. Generally speaking, "a reading above 50% indicates that the manufacturing economy is generally expanding; below 50% indicates that it is generally contracting." Helping the index recoup some of its recent losses was the surge in **New Orders** (64.9 v. 55.3), **Production** (61.9 v. 57.9), **Exports** (55.5 v. 50.5), **Supplier Deliveries** (57.1 v. 52.0), and **Employment** (46.4 v. 45.6). Of note, was the jump in the **Prices Paid Component** (65.0 v. 55.0).

Friday, August 28th

The Bureau of Economic Analysis reported that **PERSONAL INCOME** remained unchanged during July, this after falling 1.3% during June as the economic stimulus payments continue to taper off. Over the past twelve months, personal incomes have fallen 2.4%, causing many to wonder where the recovery in consumer spending will come from. **DISPOSABLE PERSONAL INCOME** (personal income less taxes) was also unchanged during July after falling 1.3% during June (-0.3% y/y). **PERSONAL CONSUMPTION**, which represents approximately 70% of economic activity, rose by 0.2% during July, by 0.6% during June and its fifth consecutive monthly increase. Over the past year Personal Consumption Expenditures have fallen 1.6% as consumers continue to deleverage. Given the fact that incomes fell faster than consumption, the result was a movement down in the nation's **SAVINGS RATE** to 4.2% during July, from 4.9% in June. The **PCE CHAIN PRICE INDEX**, one of the Fed's favorite measures of inflation was unchanged during July, rose 0.5% during June, but has fallen 0.8% y/y while the **core PCE Chain Price Index** rose 0.1% during July, by 0.2% during June, and by 1.4% y/y.

The University of Michigan reported that its **FINAL AUGUST READING OF CONSUMER SENTIMENT** rose to 65.7% from 63.2% mid-August, but fell from a final July reading of 66.0%. The **expectations** index recovered to 65.0% at the close of August from 62.1% mid-month and from 63.2% at the end of July. The **current conditions** component recovered to 66.6% at the end of August from 64.9% during the middle of last month, but fell from 70.5% at the end of July.

Thursday, August 27th

In its **FIRST REVISION TO SECOND QUARTER GROSS DOMESTIC PRODUCT**, the Commerce Department reported that it fell a 1.0%, the same as was initially reported and less than the consensus estimate of 1.5% and less than the 5.5% drop recorded during Q1. **Domestic Final Demand** fell at a revised annualized rate of 1.2% (-3.8% y/y) during the second quarter vs. an initially reported drop of 1.5% during the second quarter, far better than the 6.4% drop during Q1. **Inventories** were revised downward to have a negative drag of 1.4% Q2 GDP vs. an initially reported drag of 0.8% while the positive impact from **foreign trade** rose to 1.6% (+0.9% y/y) from 1.4%. The **PCE Chained GDP Price Index** was revised to unchanged from a gain of 0.2%. (+1.5% y/y).

Wednesday, August 26th

ORDERS FOR DURABLE GOODS (those expected to last at least three years) increased 4.9% during July and, in addition, losses during June were pared back to 1.3% from an originally reported decline of 2.5%. Over the past year, Orders for Durable Goods have fallen 22.8%. Orders were led higher by the 8.5% rise in demand for NonDefense Capital Goods. **Excluding transportation, orders for durable goods** rose 0.8% during July, by 2.5% during June, but have fallen 22.5% y/y. Finally, inventories fell for the seventh consecutive month, during July by 0.8%.

The Commerce Department reported that **SALES OF NEW HOMES** rose by 38,000 or 9.6% during July to an annualized rate of 433,000 units from a revised 395,000 during May, perhaps, once again, a sign that we have reached the end of the downturn in the housing market. Sales of New Homes have fallen by 13.4% over the past year and by nearly 75% since the peak in July of 2005. The **length of time it would take to sell the current inventory of unsold homes** dropped to just 7.5 months during July from 8.8 months during June and from 12.4 months recorded during January 2009. The **median price of a new home** fell 0.15% during July to \$210,100 from \$210,400 during June and have fallen 11.5% over the past year. Of note was the fact that the **S&P CASE-SHILLER HOUSE PRICE INDEX** rose by 0.74% to 141.31 (January 1980 = 100) from 140.26, the first monthly increase since May 2006.

Tuesday, August 25th

The **CONFERENCE BOARD'S CONSUMER CONFIDENCE INDEX** surged to a level of 54.1 during August from 47.4 during July, a sign that consumer pessimism continues to wane. The **expectations component** rose to 73.5 during August from 63.4 during July while the **present situations index** rose to 24.9 from 23.3. Those surveyed that said that **jobs are "hard to get"** fell to 45.1% from 48.5% while those claiming that **jobs are "plentiful"** rose to 4.2% from 3.7%. Those **expecting business conditions to improve** increased to 22.4% from 18.4% in July.

Friday, August 21st

SALES OF EXISTING HOMES jumped 7.2% during July to an annualized rate of 5.240 million units from 4.890 million units during June, the fourth consecutive monthly increase. Sales of Existing Homes have now risen 5.0% over the past twelve months. The **inventory of unsold homes** slipped held steady at 9.4 months during June, the lowest since late 2007. The **inventory of unsold single-family homes** also fell to 8.6 months during July from 8.9 months during June, the lowest level since 2007. Finally, the **median existing-home sales price** slipped 1.98% to \$178,400 during July from \$182,000 when compared to June and have fallen 15.1% from \$210,100 when compared to year ago levels and by approximately 25% from their all-time highs.

Thursday, August 20th

The Conference Board reported that its **INDEX OF LEADING ECONOMIC INDICATORS** rose by 0.8% during July, this on the heels of strong 0.7%, 1.3% and 1.0% gains recorded during June, May, and April, respectively. These four recent numbers combined are the strongest since the United States was exiting its last recession during 2002. The recent gains put the LEI at its highest level since last June. Six of the ten components rose, the spread on interest rate maturities, the decline in average weekly initial claims for unemployment benefits, the slight uptick in average weekly manufacturing hours, the increase in stock prices and manufacturers' new orders for nondefense capital goods. Oddly enough, money supply, consumer expectations and building permits all contracted mildly.

Tuesday, August 18th

The Commerce Department reported that **HOUSING STARTS** shrunk 6,000 or 1.02% during July to 581,000 from a revised level of 587,000 (orig. 582,000) recorded during June, recovering from their lowest level recorded (525,000). Over the past twelve months housing starts have fallen 37.7%. Of note is the fact that there must be approximately 1,000,000 housing starts per year just to replace those lost to natural causes, man-induced causes or by the growing U.S. population. **Single-family** housing starts edged up 8,000 to 490,000 in July from 482,000 units during June and up 79,000 411,000 starts during May, thus notching their fifth consecutive monthly increase. Over the past year single-family housing starts have fallen 22.5% and have fallen seventh-five percent from its peak during January 2006. **Multi-family** housing starts fell 13.3% during July to 91,000 from 105,000 thus marking a record low for this series. Over the past year they have fallen 69.8%. Finally, **BUILDING PERMITS**, a preview of future housing starts, slipped 1.8% during July to 560,000 from 570,000 and have fallen by 39.4% y/y.

Prices at the wholesale level as measured by the **PRODUCER PRICE INDEX** slumped 0.9% during July, reversing the 1.8% increase recorded during June. Over the past year the PPI has fallen 6.4%. The decline in the PPI was due in large part to the 2.2% drop in energy prices. Of note was the 10.2% (-45.1% y/y) decrease in gasoline prices as well as the 3.3% (-30.9% y/y) rise in the wholesale cost of natural gas. Excluding food and energy, the so-called **core PPI** fell 0.1% during July, rose 0.5% during June, and has risen 2.6% y/y. Wholesale Prices at the **Intermediate Level** fell 0.2% (-15.0% y/y) during July while prices for **Crude Goods** (Raw Materials) slumped by 4.5% during July, rose 4.6% during June and has fallen 45.0% y/y.

Friday, August 14th

INDUSTRIAL PRODUCTION, a measure of strength of the manufacturing, factory and utility sectors, rose 0.5% during July, the first monthly increase since December 2006. Year-Over-Year Industrial Production has fallen 13.0%, just off its record 13.6% decline recorded during May, the steepest since the latter part of 1946 when the United States Factory Sector was winding down its production capacity increased for World War II. **CAPACITY UTILIZATION** rose to 68.5% from 68.1%, the record low for the series which dates back to 1966. Utilization in the factory sector improved to 65.4% during July from 64.6% and from a near 80% peak back in 2007.

Prices at the retail level as represented by the **CONSUMER PRICE INDEX** went unchanged during July, this after rising 0.7% during June. Over the past year the CPI has fallen 1.9%, the largest drop since 1950. The **core CPI**, which is represented by the CPI excluding food and energy, rose just 0.1% during July, this after rising 0.2% during June and 1.6% y/y. Finally, the **chained CPI**, which measures inflation, but adjusts for shift in the mix of consumer purchases, fell 0.2% during July and has fallen 1.9% y/y while the **core chained CPI** remained unchanged during July, remained unchanged during June, but has risen 2.2% y/y.

Thursday, August 13th

RETAIL SALES slumped 0.1% during July, this after rising an upwardly revised 0.8% during June (orig. +0.6%) and despite the 2.4% positive impact from automobile sales, certainly as a result of the “cash for clunkers” program. Over the past year Retail Sales have fallen 8.3%. **EXCLUDING AUTOMOBILES AND GASOLINE** and perhaps illustrative of the tendency of the consumer to truly spend, Retail Sales fell 0.4% during July (-4.6% y/y) during July while **excluding automobiles**, they fell 0.6% (-8.5% y/y).

U.S. Import Prices fell by 0.7% during July, the first decline after four consecutive monthly increases as petroleum fell 2.8%, also after rising for four consecutive months. Import prices remain 19.3% below year ago levels as petroleum prices have cratered 49.9%. During June, Import Prices rose by 2.6%. **Export prices** slipped 0.3% in July and have fallen 8.1% y/y. **Agricultural export prices** fell 4.9% during July and have fallen 22.3% y/y while **Non-Agricultural Export Prices** rose 0.2% in July, but have fallen 6.5% y/y.

BUSINESSES SLASHED INVENTORIES during June by 1.1%, this after cutting them by 1.1% and 1.2% during June and May, respectively, marking the tenth consecutive month, a streak that is the longest since the fifteen months ending April 2002. Year-over-year business inventories have fallen 9.8%. This pace of inventory reduction has not been witnessed since 1980 and perhaps is signaling that when the economy just stabilizes businesses will have to ramp up production. **BUSINESS SALES** rose 0.9% during June, the first monthly increase since May 2008. The combination of declining inventories and increasing sales pushed the **INVENTORY-TO-SALES RATIO** to 1.41 months from 1.42 months.

Wednesday, August 12th

The **U.S. Trade Deficit** during June rose 3.85% to \$27.00 billion from an unrevised \$26.00 billion during May. The consensus estimate projected the deficit to climb to \$28.5 billion. Nonetheless, the U.S. Trade Deficit sits near an eight year low. Petroleum costs rose 15.5% to \$59.17/bbl during June from \$51.21/bbl during May and by 50.9% from \$39.22 during February. Overall, **Imports** rose 2.3% to \$152.8 billion from \$149.3 billion while **exports** rose 2.0% to \$125.8 billion from \$123.3 billion. We agree with James O’Sullivan, senior economist at UBS Securities who states that “it looks like the plunge in exports is over, which is of course consistent with the goal of the economy starting to stabilize after a dramatic collapse.”

Friday, August 7th

The Federal Reserve reported that **CONSUMER CREDIT** fell by \$10.3 billion or at an annualized rate of 4.5% during June, signaling that consumers are continuing to repair their balance sheets. This represents the fifth consecutive monthly drop and comes on the heels of an upwardly revised \$5.4 billion drop (orig. -\$3.2 billion) recorded during May. According to Haver Analytics, “Annualized, credit growth averaged 8% during the fifteen years ended 2007. Over an even longer time period that increase does not loom particularly large. However, against an average 5% growth in disposable income during those years, it precipitated a rise in the ratio to disposable income to 24% from a longer term norm of 17%.” **Non-revolving credit** (automobiles & consumer durables), which accounts for nearly two-thirds of total consumer credit, fell 3.8% or \$5.04 billion while **revolving credit** (credit cards) outstanding fell 6.8% or \$5.3 billion during June, this according to the Federal Reserve. This combination pushed the **SAVINGS RATE** up to 5.2%.

Friday, July 31st

The weakness in the economy helped to keep the widest look at labor costs, the **EMPLOYMENT COST INDEX**, in check over the past quarter. The ECI rose by 0.2% during the second quarter, matching the gains notched during the first quarter, but nonetheless representing the lowest increase in a decade while over the past year the index rose by just 1.5%, an all-time low for this series, which dates back to 1981. The **wages & salaries component** (70% of ECI) rose by 0.2% (1.5% y/y) during the second quarter, this following the 0.2% gain during the first quarter. The **cost of benefits** rose by 0.2% over the past quarter, by 0.2% during the first quarter and by just 1.3% over the past twelve months. As noted by the Department of Labor, the ECI “measures quarterly changes in compensation costs, which include wages, salaries, and employer costs for employee benefits for civilian workers (non-farm private and State and local government).” *As of the this latest release, all components of the ECI have lagged the CPI over the past year, thus reducing real purchasing power.*

Economic & Investment Definitions

U.S. Savings

Low versus the historical norm. However, remember that this rate does not include Social Security, Pensions or Home Equity, some areas that Americans depend on for retirement income.

Strength of Dollar

A Weak Dollar increases exports while a Strong Dollar decreases exports. The reasoning is that a Weak dollar makes goods and services cheaper abroad while a strong dollar makes exports more expensive abroad. A strong dollar also helps keep inflation at bay by making imports cheaper, thereby helping keep wage and other inflationary pressures below the boiling point. It also provides foreign Treasury buyers two ways to profit – through bond price and dollar appreciation.

A weak dollar can be inflationary since it makes imports more expensive. This, in turn, gives domestic companies room to increase prices. Conversely, a strengthening dollar makes imports more competitive on a price basis.

Trade Deficit

An expanding trade deficit (imports exceeding exports) hurt the dollar because more dollars are held by foreigners. Some fear that foreigners will tire of holding declining dollars and sell them for other currencies putting added pressure on the greenback. In addition, foreign investors with U.S. assets are seeing those holdings decline as the dollar falls. As these investors sell these holdings and move to investments in other countries, it adds to selling pressure of the dollar.

Employment Cost Index

Compiled by the Bureau of Labor Statistics, is considered the most accurate measure of wages, salaries and benefits, measuring compensation per hour, including wages, salaries and the cost of benefits - from health insurance to Social Security contributions. Wages and salaries account for approximately seventy percent of the employment cost index with benefits (health insurance and pension benefits) accounting for the rest.

Put/Call Ratio

The put-to-call ratio measures the sentiment of options traders. When the number of puts compared to calls is high, that means that many traders think the market will go down. When call volume outnumbers puts, many think the market is going to rise. Many use this as a contrarian indicator meaning that if options traders are too bullish, the market may actually fall.

Put option buyers bet that stocks will fall while call buyers bet that stocks will rise. Conversely put option sellers bet that stocks will rise while call sellers bet that stocks will fall. Options buyers and sellers are subject to expiration dates. Buyers of call options bet that a stock will be worth more than the price set by the option (the strike price), plus the price they pay for the option itself. Buyers of put options bet that the stock's price will drop below the price set by the option. When the number of puts compared to calls is high, that means that many traders think the market will go down. When call volume outnumbers puts, many think the market is going to rise. Many use this as a contrarian indicator meaning that if options traders are too bullish, the market may actually fall.

Volatility Indices (^vix and ^vxn)

According to the Chicago Board of Options Exchange, the Volatility Index, “known by its ticker symbol “vix,” was introduced by CBOE in 1993, and measures the volatility of the U.S. equity market. It provides investors with up-to-the-minute market estimates of expected volatility by using real-time OEX index option bid/ask quotes.”

The CBOE NASDAQ Volatility Index, known by its ticker symbol “vxn,” is the “benchmark of “tech stock” volatility based on the implied volatility of the NASDAQ 100 Index options. Calculated using the same methodology as the CBOE Market Volatility Index, the VXN is constructed so that, at any given time, it represents the implied volatility of a hypothetical at-the-money NDX option with thirty calendar days to expiration.”

Arms Index (^sti.n)

A contrarian index that indicates the bullishness or bearishness of investors. A reading below one indicates more action in rising stocks and a figure above one indicates more action in declining stocks. As a contrarian indicator, a reading above one is bullish for investors while a reading below one indicates bearishness.

Advancing Stocks / Declining Stocks + Advancing Volume / Declining Volume = The result is the Arms Index

Federal Reserve Data, Dates, Releases & Definitions

2009 Scheduled FOMC Meetings:

September 22-23; November 3-4; December 15-16, 2009.

Federal Funds Rate

The rate set by the Federal Reserve and that banks charge each other to borrow money overnight (the overnight inter-bank lending rate). The Fed Funds target rate currently is between 0.00% and 0.25%; the most recent rate change being a 75 to 100-basis point rate cut on December 16th, 2008. This was the tenth rate cut after the Fed Funds Rate peaked at 5.25% on June 29th, 2007.

Discount Rate

The interest rate charged to commercial banks and other depository institutions on loans they receive from the Federal Reserve. Currently at 0.50%. Most recent change was a 75-basis point rate cut on December 16th, 2008 at the regularly scheduled meeting. This past cut marked the ninth consecutive, the first coming on August 17th, 2007. The Discount Rate peaked at 6.00% on June 29th, 2007.

Money Supply

The Federal Reserve controls the supply of money in the economy through open market operations with banks. If the Fed is buying U.S. Treasuries from banks, the banks receive cash, which they then can lend out. The Fed required banks to maintain reserves of ten percent of deposits. Therefore, for every dollar they receive by selling Treasuries to the Fed, \$9.00 can be lent out to borrowers. Therefore, new dollars are entering the economy. The Fed therefore drains liquidity from the economy through selling U.S. Treasuries to member banks.

M1-A	currency plus demand deposits
M1-B	M1-A plus other checkable deposits
M2	M1-B plus overnight repos, money market funds, savings and time deposits less than \$100,000,000
M3	M2 plus large time deposits and term repos
M4	M3 plus all other liquid assets

Statement by The Federal Reserve following the August 12th, 2009 Meeting

Information received since the Federal Open Market Committee met in June suggests that economic activity is leveling out. Conditions in financial markets have improved further in recent weeks. Household spending has continued to show signs of stabilizing but remains constrained by ongoing job losses, sluggish income growth, lower housing wealth, and tight credit. Businesses are still cutting back on fixed investment and staffing but are making progress in bringing inventory stocks into better alignment with sales. Although economic activity is likely to remain weak for a time, the Committee continues to anticipate that policy actions to stabilize financial markets and institutions, fiscal and monetary stimulus, and market forces will contribute to a gradual resumption of sustainable economic growth in a context of price stability.

The prices of energy and other commodities have risen of late. However, substantial resource slack is likely to dampen cost pressures, and the Committee expects that inflation will remain subdued for some time.

In these circumstances, the Federal Reserve will employ all available tools to promote economic recovery and to preserve price stability. The Committee will maintain the target range for the federal funds rate at 0 to 1/4 percent and continues to anticipate that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for an extended period. As previously announced, to provide support to mortgage lending and housing markets and to improve overall conditions in private credit markets, the Federal Reserve will purchase a total of up to \$1.25 trillion of agency mortgage-backed securities and up to \$200 billion of agency debt by the end of the year. In addition, the Federal Reserve is in the process of buying \$300 billion of Treasury securities. To promote a smooth transition in markets as these purchases of Treasury securities are completed, the Committee has decided to gradually slow the pace of these transactions and anticipates that the full amount will be purchased by the end of October. The Committee will continue to evaluate the timing and overall amounts of its purchases of securities in light of the evolving economic outlook and conditions in financial markets. The Federal Reserve is monitoring the size and composition of its balance sheet and will make adjustments to its credit and liquidity programs as warranted.

Voting for the FOMC monetary policy action were: Ben S. Bernanke, Chairman; William C. Dudley, Vice Chairman; Elizabeth A. Duke; Charles L. Evans; Donald L. Kohn; Jeffrey M. Lacker; Dennis P. Lockhart; Daniel K. Tarullo; Kevin M. Warsh; and Janet L. Yellen.

Statement by The Federal Reserve following the June 23rd 24th, 2009 Meeting

Information received since the Federal Open Market Committee met in April suggests that the pace of economic contraction is slowing. Conditions in financial markets have generally improved in recent months. Household spending has shown further signs of stabilizing but remains constrained by ongoing job losses, lower housing wealth, and tight credit. Businesses are cutting back on fixed investment and staffing but appear to be making progress in bringing inventory stocks into better alignment with sales. Although economic activity is likely to remain weak for a time, the Committee continues to anticipate that policy actions to stabilize financial markets and institutions, fiscal and monetary stimulus, and market forces will contribute to a gradual resumption of sustainable economic growth in a context of price stability.

The prices of energy and other commodities have risen of late. However, substantial resource slack is likely to dampen cost pressures, and the Committee expects that inflation will remain subdued for some time.

In these circumstances, the Federal Reserve will employ all available tools to promote economic recovery and to preserve price stability. The Committee will maintain the target range for the federal funds rate at 0 to 1/4 percent and continues to anticipate that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for an extended period. As previously announced, to provide support to mortgage lending and housing markets and to improve overall conditions in private credit markets, the Federal Reserve will purchase a total of up to \$1.25 trillion of agency mortgage-backed securities and up to \$200 billion of agency debt by the end of the year. In addition, the Federal Reserve will buy up to \$300 billion of Treasury securities by autumn. The Committee will continue to evaluate the timing and overall amounts of its purchases of securities in light of the evolving economic outlook and conditions in financial markets. The Federal Reserve is monitoring the size and composition of its balance sheet and will make adjustments to its credit and liquidity programs as warranted.

Voting for the FOMC monetary policy action were: Ben S. Bernanke, Chairman; William C. Dudley, Vice Chairman; Elizabeth A. Duke; Charles L. Evans; Donald L. Kohn; Jeffrey M. Lacker; Dennis P. Lockhart; Daniel K. Tarullo; Kevin M. Warsh; and Janet L. Yellen.

Statement by The Federal Reserve following the March 16th-17th, 2009 Meeting

Information received since the Federal Open Market Committee met in January indicates that the economy continues to contract. Job losses, declining equity and housing wealth, and tight credit conditions have weighed on consumer sentiment and spending. Weaker sales prospects and difficulties in obtaining credit have led businesses to cut back on inventories and fixed investment. U.S. exports have slumped as a number of major trading partners have also fallen into recession. Although the near-term economic outlook is weak, the Committee anticipates that policy actions to stabilize financial markets and institutions, together with fiscal and monetary stimulus, will contribute to a gradual resumption of sustainable economic growth.

In light of increasing economic slack here and abroad, the Committee expects that inflation will remain subdued. Moreover, the Committee sees some risk that inflation could persist for a time below rates that best foster economic growth and price stability in the longer term.

In these circumstances, the Federal Reserve will employ all available tools to promote economic recovery and to preserve price stability. The Committee will maintain the target range for the federal funds rate at 0 to 1/4 percent and anticipates that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for an extended period. To provide greater support to mortgage lending and housing markets, the Committee decided today to increase the size of the Federal Reserve's balance sheet further by purchasing up to an additional \$750 billion of agency mortgage-backed securities, bringing its total purchases of these securities to up to \$1.25 trillion this year, and to increase its purchases of agency debt this year by up to \$100 billion to a total of up to \$200 billion. Moreover, to help improve conditions in private credit markets, the Committee decided to purchase up to \$300 billion of longer-term Treasury securities over the next six months. The Federal Reserve has launched the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses and anticipates that the range of eligible collateral for this facility is likely to be expanded to include other financial assets. The Committee will continue to carefully monitor the size and composition of the Federal Reserve's balance sheet in light of evolving financial and economic developments.

Voting for the FOMC monetary policy action were: Ben S. Bernanke, Chairman; William C. Dudley, Vice Chairman; Elizabeth A. Duke; Charles L. Evans; Donald L. Kohn; Jeffrey M. Lacker; Dennis P. Lockhart; Daniel K. Tarullo; Kevin M. Warsh; and Janet L. Yellen.

Statement by The Federal Reserve following the December 15th-16th, 2008 Meeting

The Federal Open Market Committee decided today to establish a target range for the federal funds rate of 0 to 1/4 percent.

Since the Committee's last meeting, labor market conditions have deteriorated, and the available data indicate that consumer spending, business investment, and industrial production have declined. Financial markets remain quite strained and credit conditions tight. Overall, the outlook for economic activity has weakened further.

Meanwhile, inflationary pressures have diminished appreciably. In light of the declines in the prices of energy and other commodities and the weaker prospects for economic activity, the Committee expects inflation to moderate further in coming quarters.

The Federal Reserve will employ all available tools to promote the resumption of sustainable economic growth and to preserve price stability. In particular, the Committee anticipates that weak economic conditions are likely to warrant exceptionally low levels of the federal funds rate for some time.

The focus of the Committee's policy going forward will be to support the functioning of financial markets and stimulate the economy through open market operations and other measures that sustain the size of the Federal Reserve's balance sheet at a high level. As previously announced, over the next few quarters the Federal Reserve will purchase large quantities of agency debt and mortgage-backed securities to provide support to the mortgage and housing markets, and it stands ready to expand its purchases of agency debt and mortgage-backed securities as conditions warrant. The Committee is also evaluating the potential benefits of purchasing longer-term Treasury securities. Early next year, the Federal Reserve will also implement the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses. The Federal Reserve will continue to consider ways of using its balance sheet to further support credit markets and economic activity.

Voting for the FOMC monetary policy action were: Ben S. Bernanke, Chairman; Christine M. Cumming; Elizabeth A. Duke; Richard W. Fisher; Donald L. Kohn; Randall S. Kroszner; Sandra Pianalto; Charles I. Plosser; Gary H. Stern; and Kevin M. Warsh.

In a related action, the Board of Governors unanimously approved a 75-basis-point decrease in the discount rate to 1/2 percent. In taking this action, the Board approved the requests submitted by the Boards of Directors of the Federal Reserve Banks of New York, Cleveland, Richmond, Atlanta, Minneapolis, and San Francisco. The Board also established interest rates on required and excess reserve balances of 1/4 percent.

Statement by The Federal Reserve following the October 29th, 2008 Meeting

The Federal Open Market Committee decided today to lower its target for the federal funds rate 50 basis points to 1 percent.

The pace of economic activity appears to have slowed markedly, owing importantly to a decline in consumer expenditures. Business equipment spending and industrial production have weakened in recent months, and slowing economic activity in many foreign economies is damping the prospects for U.S. exports. Moreover, the intensification of financial market turmoil is likely to exert additional restraint on spending, partly by further reducing the ability of households and businesses to obtain credit.

In light of the declines in the prices of energy and other commodities and the weaker prospects for economic activity, the Committee expects inflation to moderate in coming quarters to levels consistent with price stability.

Recent policy actions, including today's rate reduction, coordinated interest rate cuts by central banks, extraordinary liquidity measures, and official steps to strengthen financial systems, should help over time to improve credit conditions and promote a return to moderate economic growth. Nevertheless, downside risks to growth remain. The Committee will monitor economic and financial developments carefully and will act as needed to promote sustainable economic growth and price stability.

Voting for the FOMC monetary policy action were: Ben S. Bernanke, Chairman; Timothy F. Geithner, Vice Chairman; Elizabeth A. Duke; Richard W. Fisher; Donald L. Kohn; Randall S. Kroszner; Sandra Pianalto; Charles I. Plosser; Gary H. Stern; and Kevin M. Warsh.

In a related action, the Board of Governors unanimously approved a 50-basis-point decrease in the discount rate to 1-1/4 percent. In taking this action, the Board approved the requests submitted by the Boards of Directors of the Federal Reserve Banks of Boston, New York, Cleveland, and San Francisco.

Statement by The Federal Reserve following the September 16th, 2008 Meeting

Joint Statement by Central Banks

Throughout the current financial crisis, central banks have engaged in continuous close consultation and have cooperated in unprecedented joint actions such as the provision of liquidity to reduce strains in financial markets.

Inflationary pressures have started to moderate in a number of countries, partly reflecting a marked decline in energy and other commodity prices. Inflation expectations are diminishing and remain anchored to price stability. The recent intensification of the financial crisis has augmented the downside risks to growth and thus has diminished further the upside risks to price stability.

Some easing of global monetary conditions is therefore warranted. Accordingly, the Bank of Canada, the Bank of England, the European Central Bank, the Federal Reserve, Sveriges Riksbank, and the Swiss National Bank are today announcing reductions in policy interest rates. The Bank of Japan expresses its strong support of these policy actions.

Federal Reserve Actions

The Federal Open Market Committee has decided to lower its target for the federal funds rate 50 basis points to 1-1/2 percent. The Committee took this action in light of evidence pointing to a weakening of economic activity and a reduction in inflationary pressures.

Incoming economic data suggest that the pace of economic activity has slowed markedly in recent months. Moreover, the intensification of financial market turmoil is likely to exert additional restraint on spending, partly by further reducing the ability of households and businesses to obtain credit. Inflation has been high, but the Committee believes that the decline in energy and other commodity prices and the weaker prospects for economic activity have reduced the upside risks to inflation.

The Committee will monitor economic and financial developments carefully and will act as needed to promote sustainable economic growth and price stability.

Voting for the FOMC monetary policy action were: Ben S. Bernanke, Chairman; Timothy F. Geithner, Vice Chairman; Elizabeth A. Duke; Richard W. Fisher; Donald L. Kohn; Randall S. Kroszner; Sandra Pianalto; Charles I. Plosser; Gary H. Stern; and Kevin M. Warsh.

In a related action, the Board of Governors unanimously approved a 50-basis-point decrease in the discount rate to 1-3/4 percent. In taking this action, the Board approved the request submitted by the Board of Directors of the Federal Reserve Bank of Boston.

Statement by The Federal Reserve following the September 16th, 2008 Meeting

The Federal Open Market Committee decided today to keep its target for the federal funds rate at 2 percent.

Strains in financial markets have increased significantly and labor markets have weakened further. Economic growth appears to have slowed recently, partly reflecting a softening of household spending. Tight credit conditions, the ongoing housing contraction, and some slowing in export growth are likely to weigh on economic growth over the next few quarters. Over time, the substantial easing of monetary policy, combined with ongoing measures to foster market liquidity, should help to promote moderate economic growth.

Inflation has been high, spurred by the earlier increases in the prices of energy and some other commodities. The Committee expects inflation to moderate later this year and next year, but the inflation outlook remains highly uncertain.

The downside risks to growth and the upside risks to inflation are both of significant concern to the Committee. The Committee will monitor economic and financial developments carefully and will act as needed to promote sustainable economic growth and price stability.

Statement by The Federal Reserve following the June 25th, 2008 Meeting

The Federal Open Market Committee decided today to keep its target for the federal funds rate at 2 percent.

Recent information indicates that overall economic activity continues to expand, partly reflecting some firming in household spending. However, labor markets have softened further and financial markets remain under considerable stress. Tight credit conditions, the ongoing housing contraction, and the rise in energy prices are likely to weigh on economic growth over the next few quarters.

The Committee expects inflation to moderate later this year and next year. However, in light of the continued increases in the prices of energy and some other commodities and the elevated state of some indicators of inflation expectations, uncertainty about the inflation outlook remains high.

The substantial easing of monetary policy to date, combined with ongoing measures to foster market liquidity, should help to promote moderate growth over time. Although downside risks to growth remain, they appear to have diminished somewhat, and the upside risks to inflation and inflation expectations have increased. The Committee will continue to monitor economic and financial developments and will act as needed to promote sustainable economic growth and price stability.

Voting for the FOMC monetary policy action were: Ben S. Bernanke, Chairman; Timothy F. Geithner, Vice Chairman; Donald L. Kohn; Randall S. Kroszner; Frederic S. Mishkin; Sandra Pianalto; Charles I. Plosser; Gary H. Stern; and Kevin M. Warsh. Voting against was Richard W. Fisher, who preferred an increase in the target for the federal funds rate at this meeting.

Limits, Limitations, Data & Dates

Social Security Data (www.ssa.gov/pressoffice/colafacts2004.htm)

Re-characterization of Roth IRA back to Traditional IRA

The Internal Revenue Service gives you up to October 15th of the year following the year of the Roth conversion to re-characterize that conversion. So for 2005 Roth conversions, the re-characterization deadline is October 15, 2003. The re-characterization treats the funds as if the conversion had never occurred. Should you re-characterize, don't forget to file an amended return and claim a refund for any tax paid on the conversion.

Retirement Savings Facts

- 2007 401(k) limits are \$15,500 for individuals under fifty years of age.
- 2007 401(k) limits for over age fifty are an additional \$5,000 as a catch-up provision.

- 2007 IRA limits are \$4,000 for individuals under fifty years of age.
- 2007 IRA limits are \$5,000 for individuals over fifty years of age.

- 2007 Roth IRA contributions phased out for Joint Filers w/ AGI between \$156,000 and \$166,000.
- 2007 Roth IRA contributions phased out for Individual Filers w/ AGI between \$99,000 and \$114,000.

Estate Tax Exclusion Limits

- 2007 & 2008 Federal Estate Tax Exclusion will remain at \$2 million.
- 2009 Federal Estate Tax Exclusion increases to \$3.5 million.
- 2010 Federal Estate Tax Exclusion decreases to \$0.
- 2011 Federal Estate Tax Exclusion increases to \$1 million.

“Try The Irrational”

The Record, 03.29.2009

As human beings, most of us are rational. We don't run in front of moving cars or put our hands on hot stovetops. Quite often becoming a successful investor requires that you take a seemingly irrational step. The more rational you are the less likely you are to buy low and sell high and the less likely you are to have faith that it's not different time. It is for this reason that, after talking to many investors, clients and non-clients alike, that we thought within the body of this column we would, in no particular order, present some thoughts and questions for the readers regarding investing.

If the entire objective of investing is to buy low and sell high, why then when investors have the chance to actually buy low and sell high very few do?

If it has never been “different this time” before regarding the stock market, why then do investors think it is different this time and investing will never again be profitable? If you do think it is different this time and it is not then you may also be making a life changing decision.

At the top of a bull market there are few pessimists. At the bottom of a bear market there are few optimists.

From top to bottom the S&P 500 dropped more than fifty-six percent. Sounds to us like it priced in a pretty severe recession.

Sometimes you can do everything right and still not be rewarded. That doesn't mean you aren't making the right choices. We recognize that stocks have gone nowhere in more than a decade. We recognize that this is very frustrating. We recognize that you are feeling somewhat insecure. However, whenever we think of this we are reminded of the author of “The Complete Book of Running,” James Fixx, a picture of health who was very instrumental in converting millions of Americans during the 1970's, including ourselves, into avid runners. Unfortunately, Mr. Fixx died at the age of fifty-two from a heart condition while running in Vermont. Is the moral of this story that Mr. Fixx should have not exercised and not eaten healthy or is it that sometimes things just don't work out as planned? We would suggest the latter.

We often get the claim that “I'm going to get back into the market once the economy looks better.” To that we respond that the stock market is a discounting mechanism and it therefore bottoms approximately six to nine months ahead of economic turns for better and for worse.

This is the worst economic downturn since the Great Depression. Pure rhetoric. Who says? During the 1970's the national unemployment rate peaked above nine percent; inflation was above ten percent and mortgage rates were above fifteen percent. Despite the fact that things may get worse, as of today unemployment is just over eight percent; inflation is near two percent and mortgage rates are at a forty year low, 4.85%.

Gold is a hedge against inflation and not an asset class.

At the current time, investors are experiencing the worst ten-year stretch since the ten years ending 1938. Sounds like investors over the next ten years might be amply rewarded for their pain they have endured over the prior ten.

At the bottom of the bear market most investors will be severely under allocated to stocks.

This is just some food for thought. We all have different goals and objectives. We all have different sources of income leading up to and in retirement so that we must all plan accordingly. However, over the past century, for the average American the surest way to achieve wealth has been through investing in the stock market. Oh, we forgot. It's different this time.

“Perform Your Own Stress Test”
The Record, 03.01.2009

Beginning this past Wednesday and continuing through the end of April, U.S. Federal Bank and Thrift Supervisors will be conducting an extensive analysis of banking institutions with assets greater than \$100 billion to determine if such banks have sufficient capital buffers to withstand “the impact of an economic environment that is more challenging than is currently anticipated.” According to this agency, this assessment will test financial institutions under a “baseline scenario [that] reflects a consensus expectation among private forecasters and the more adverse scenario [that] reflects a deeper and longer recession.” The more adverse scenario includes unemployment rates above ten percent and a housing market that continues to decline.

With this in mind, we believe that investors should conduct their own “stress test” to determine whether or not the current allocation of their assets can withstand a stock market that continues to decline. The question that this stress test should answer is “if the stock market declines another twenty percent from its present level of approximately 7,270 on the Dow Jones Industrial Average and remains at this subdued level of approximately 5,800, will my standard of living be impacted, and, if so, to what extent?”

When performing the above referenced stress test, be careful to include all of your assets that can produce income such as a Defined Benefit Pension Plan, Social Security, and the values of your 401(k), 403(b) or other Employer-Sponsored Defined Contribution Plan. If you are already retired, include a conservative value of your home for a potential reverse mortgage. On the liability side, don’t forget your daily living expenses as well as entertainment costs and gifts in addition to housing costs, insurance costs, energy costs and the cost of your automobile.

If the outcome of your own stress test indicates that your life will not change, then ignore the noise coming out of the financial markets and focus on what is really important, your life. If, however, a decline to this extent would impact your standard (quality) of life, then perhaps you should make some changes to your investment portfolio. Or, if you are retired, perhaps what you will leave to your heirs might need to be adjusted. If such an unanticipated “adverse scenario” becomes a reality, tough choices, like this, might be necessary to preserve your standard of living.

The probability of such a scenario is relatively low, less than twenty-five percent, but if you were to conduct such a stress test, it may allow you to invest more appropriately for your needs without the mental highs and lows that are part and parcel of a bear market.

Finally, if you pass your own stress test, be patient and let time heal our economic woes. We realize that this may be difficult because we live in a media-saturated country, a country where instant gratification is the rule rather than the exception, in a country where solutions such as liposuction and diet pills garner attention rather than diet and exercise. Once again, we ask that should you pass your own stress test, be patient and tune out the daily noise.

“Goldman Sachs Is Right on Target”

The Record, 01.14.2008

This past Wednesday, in a note to clients, economists at renowned investment bank Goldman Sachs, the brokerage firm that was brilliantly shorting and therefore profiting from fixed-income products that were related to the subprime mortgage mess, predicted that the U.S. economy would enter into a modest recession during 2008. We couldn't agree more.

Most economists define a recession as two consecutive quarters of negative growth in Gross Domestic Product (GDP) which, also by definition, measures the expansion or contraction of the economy of a nation. Goldman Sachs predicts that “the recession is likely to last two to three quarters and should be relatively mild by historical standards, with a cumulative decline in GDP of only about a half percent,” this according to Goldman Sachs economists' Jan Hatzius and Ed McKelvey. For all of 2008, Goldman Sachs expects GDP to rise by 0.8%. According to the two economists, keeping the recession “relatively mild” is the assumption that the Open Market Committee of the Federal Reserve, the body that determines the direction of short-term interest rates, will aggressively lower rates in order to provide liquidity to the credit markets and ease the credit crunch. Ultimately, the impact of this mild recession will be an increase in the unemployment rate from its current level of 5.0% to 6.25% by the end of this calendar year.

All of the above loudly begs the question, **“fine, but what does this mean for my investments?”** Simply put, we believe that during the fourth quarter of 2007 the U.S. economy entered a period of slow to somewhat stagnant economic growth that will most likely last throughout the majority of 2008. Whether this is the slight majority or vast majority of 2008 has everything to do with just how aggressive the Fed is when it responds to interest rates. Thus far, we believe that the Fed has not acted aggressively enough when regarding interest rates and that the downturn in the economy, if one thinks of it as a moving car or other vehicle, has maintained its distance over the Fed. The Fed must do something to close this gap and to eventually move ahead of the economic downturn. It is with the efforts of the Fed, perhaps along with fiscal (tax) policy relief coming from congress and the Bush Administration that the economy will eventually turn for the better.

The Chairman of the Federal Reserve, Ben Bernanke, in a recent luncheon speech in Washington, D.C., stated that the Fed stands “ready to take substantive additional action as needed to support growth and to provide adequate insurance against downside risks.” The jury is still out as to what Chairman Bernanke defines as “substantive” when it comes to the action required to stem the economic downturn that is facing America.

To determine where the stock market may go one must look back at historical data. We did just that and found that during economic downturns when the Federal Reserve has lowered interest rates at three consecutive meetings, the stock market has responded favorably as measured by a time frame of one year. In fact, there have been thirteen times in which the Fed has cut interest rates at three consecutive meetings and the stock market has been higher one year later on every occasion, save one. That was during the early 1930's when the United States was on the verge of the Great Depression. Therefore, if you believe as we do, that we are not entering into an era of depression, stock investors have a golden opportunity to add to their holdings and reap capital gains one year hence. Unfortunately, during times like this it is very uncomfortable to invest in stocks, but we cannot see anything other type of investment that we would rather be in than equities. That said, maintain a disciplined investment approach and always have a plan for selling a position after making the purchase.

“Secular vs. Cyclical Bear Market”

The Record, 05.11.2003

There is a great debate raging in the investment community over whether we have entered a **secular** bear market or have we, since early 2000, merely been correcting the excesses of the late 1990's in a **cyclical** bear market within a bull market that began in 1982. For the purposes of this article, secular can be defined as the general trend (or climate) that lasts for a long period of time. Typically, the secular pattern is dotted with abnormalities that run counter to the overriding trend, but are relatively short in nature. For example, the Dow Jones Industrial Average rose from a closing level of 776.90 on August 12, 1982 to 11,723.00 on January 14, 2000 for a gain of more than 1400%! However, within this long-term or secular bull market there were four cyclical or short-term bear markets including one that lasted approximately three months in 1987; one that lasted approximately four months during 1990; one that lasted ten months during 1994; and one that lasted a mere two months during 1998.

Prior to the beginning of **this bear market that has now lasted nearly forty months**, the longest bear market since the beginning of the secular bull that dates back to 1982, was the bear of 1994 that lasted ten months. *Keep in mind that it is not only the depth of a bear market, but the length of one that determines an investor's appetite or lack of appetite for stocks!*

Having analyzed a secular bull market, one that perhaps concluded in early 2000, let us now turn our attention to the most recent secular bear market, one that peaked on February 9, 1966 at Dow 995.20 and one that, fifteen years later, on February 9, 1981 closed at Dow 947.20, obviously below the prior high set one and one-half decades ago! It is interesting to note that within the secular bear, there were no less than four cyclical bull markets; one that lasted twenty-six months, from October 7, 1966 to December 3, 1968 when the Dow rose from 744.30 to 985.20 representing a gain of 32.37%; one that lasted more than thirty-one months, from May 26, 1970 to January 11, 1973 when the Dow rose from 631.20 to 1051.70 representing a gain of 66.62%; a cyclical bull that lasted twenty-two months, from December 6, 1974 to September 21, 1976 when the Dow rose from 577.60 to 1014.80 representing a gain of 75.69%; and a move that lasted nearly three years, from March 6, 1978 to February 9, 1981 when the Dow rose from 742.70 to 947.20 representing a gain of 27.53%.

It is safe to conclude from the above paragraph that it is possible to make money in a flat, secular bear market. (Please note that the data utilized above does not include dividends.) The heavy nature of this article hopefully reflects the importance of the following question and the impact that this question will have upon your financial future. Is this a long-term bear or a pause amidst the bull that began in 1982?

Despite the fact that it is too early to tell whether this is a cyclical bear market or a secular bear market, it is important to note that regardless of which type of market we are in, the Dow has risen more than 17.70% off its recent lows; the S&P 500 close to 20% while the NASDAQ Composite has risen more than thirty-five percent indicating a bullish pattern. It will be interesting to see how the bears react if the Dow rises more than twenty percent from its closing low of 7286.27 set on October 9, 2002. A close above twenty percent is the definition of a bull market trend. This will happen if the Dow closes at or above 8743.52 and will put the pressure on the bears.

Despite the question of whether we may be about to embark on a new secular bull market or a cyclical bull within a secular bear, investors should have upside and downside targets for their stocks and utilize stop/loss provisions to protect their capital. Stay tuned.

“China, A Country to Reckon With”

The Record, 05.02.2004

As investors receive and then open their April statements sometime later next week or early the following week and see the slight decline in their portfolio values, it will probably occur to only a few of them that the Chinese economy may be to blame.

Late this past week, in an effort to slow down an economy that had grown at an annualized rate of 9.7% during the first quarter of 2004, Chinese economic officials told banks to stop lending to certain industries, including the aluminum, cement, real estate and steel industries, fearing that their economy was in danger of overheating. Furthermore, the People’s Bank of China has decided to raise interest rates for the first time since 1955 also indicative of their intention to slow the economy to a more sustainable pace.

Given the fact that many, including us, attribute a good portion of the run-up in commodity prices to soaring demand from China, we thought it would be a good idea to familiarize readers of our column to some of the demographics and demand emanating from the Chinese.

China is the most populous country in the world with over 1.29 billion people inhabiting an area slightly smaller than Canada, but larger than the United States. This represents approximately one-fifth of the global population. According to the State Statistical Bureau for the People’s Republic of China and noted in a Prudential Research report, “the percent of the population living in rural areas fell to 61% last year, down from 79% in 1982 and 88% in 1952. This trend toward urbanization is very similar to the experience in the United States during the 1800s and through the 1970s. In 1800, 94% of the U.S. population resided in rural areas. By 1900, this percentage declined to 60%. It fell to a record low of 26% in the 1970s.” The result is an average annual increase of urban population of approximately 20 million people!

China’s main source of energy comes from coal, which they mine themselves. China consumes approximately 5.4 million barrels of oil per day, a number which should increase to approximately 7 million barrels per day by 2010. By contrast, the United States consumes over twenty million barrels per day. China now imports approximately 30% of its oil consumption.

There are ten million cars, trucks, and buses in all of China. This compares with 134 million registered cars, trucks, and buses in the United States.

China consumes approximately 50% of the world’s cement, and 36% of its annual production of steel.

The average hourly earnings of a Chinese manufacturing worker is \$0.61 compared with the average hourly earnings of a United States worker of \$16.14! Despite being the largest country in terms of population, there are more than one hundred countries in the world with higher per capita incomes!

Agriculturally, China’s annual grain output is approximately 500 million tons, not enough to feed the billion-plus people. Therefore, China is a net importer of grain. With the United States, this amounted to over 800 million bushels of soybeans during 2003. All this with only 7% of the world’s farmable land.

With China’s population increasing by approximately ten million people per year and with average hourly earnings well under \$1.00, the economic potential is mind boggling. However, thinking back to the trials and struggles of the United States over the past two centuries and one realizes that this potential will not be easily realized. Investors in China must be patient. However, we believe this patience will be well-reward over the next three to five years.
